SELF-ADJUSTING **bbs-tek® Back-Up Alarms**

brings even greater safety to jobsites across the U.S.

Broadband Back-Up Alarm Technology is sweeping the U.S. with its unequalled ability to provide the safest, neighbor-friendly reverse warning system for moving equipment in today's jobsite environment. It already provides the safest directional alarm with the least noise nuisance available as endorsed by the Noise Abatement Society. In addition, they are the only alarms approved by the City of New York for use on construction vehicles working near sensitive areas such as schools, hospitals, parks and places of worship.

We are now proud to introduce our latest product release, the SELF-ADJUSTING bbs-tek® alarm with a dB(A) range from 77 to 97, making it ideal for trucks, buses, coaches, fork-lifts, emergency response, garbage and other inner city equipment as well as airport vehicles and light mobile plant working in areas where ambient noise levels may vary significantly. This is particularly vital for vehicles manoeuvring in close proximity to each other or vehicles going from a noisy environment such as a factory to a quieter external location such as a work-yard where a narrow-band (beep-beep) alarm would annoy neighbors. The alarm monitors the ambient noise level once every second (approx.) and adjusts the alarm to between 5 and 10 dB above the noise level.
